ABSTRACT OF THE DISCLOSURE

A ladder-type film bulk acoustic resonator (FBAR)

filter comprises two series FBARs and two parallel FBARs.

Each FBAR has a top electrode, a bottom electrode, and a

5 piezoelectric layer sandwiched between the top and bottom

electrodes. The top electrodes of the two series FBARs form

part of a signal line of a coplanar waveguide transmission

line. The top electrodes of the two series FBARs are

connected to associated circuitry. The two series FBARs

10 have a common bottom electrode.
